What is the LCIR?

The Florida Legislative Committee on Intergovernmental Relations (LCIR) is a legislative entity that facilitates the development of intergovernmental policies and practices. The Florida LCIR strives to improve coordination and cooperation among state agencies, local governments, and the federal government.

What Issues Have Been Addressed by the LCIR?

The LCIR completes several publications annually, including the Local Government Financial Information Handbook, Finalized Salaries of County Constitutional Officers and Elected School District Officials, and Intergovernmental Impact Report (Mandates and Measures Affecting Local Government Fiscal Capacity). In addition, the LCIR has addressed the following issues:

- Municipal Incorporations and Annexation
- Impact Fees
- Natural Disaster Preparedness, Response and Recovery
- Local Government Financial Emergencies
- Urban Infill & Infrastructure Capacity
- Marina and Dock Permitting
- State, Regional, and Local Planning
- Voting by Mail
- Economic Development
- Affordable Housing
- Federal Funds to Florida
- Federal/State Relations

If you would like additional copies of this report or have comments or questions pertaining to the information contained herein, please contact the LCIR at (850) 488-9627. We welcome your input or suggestions. Our mailing address is:

Executive Summary

This is an update of the Florida Legislative Committee on Intergovernmental Relations (LCIR) Report *Federal Grants to Florida's Local Governments*. Changes included in this report expand the sample of grants and the sample of local governments by including expenditures of pass-through awards in the sample of grants analyzed and school districts in the sample of local governments analyzed. The effect of this change is to more than double the total level of expenditures, as illustrated in **Table 1**.

Furthermore, grants that are part of what was identified as the "FEMA Effect" in the prior report are included in local government totals because expenditures from these programs, while remaining substantial, have decreased in magnitude and as a share of total expenditures. This decrease, for counties and municipalities, is illustrated in **Table 2**. In another change that reflects the declining role of recovery from the unusually active hurricane seasons of 2004 and 2005, annual totals are included, instead of the 5 year cumulative time span utilized in the prior report.

LCIR staff conducted a survey of local governments in an attempt to publicize this report, further publicize www.Grants.gov, and gauge interest in grant seeking. Some responses bear discussion, first being the relatively low number of local governments that do not actively pursue grants. Second, many local governments indicated that while they do pursue federal grants the respondent was unaware of whether the local government was registered with www.Grants.gov. Based upon this analysis of survey results outreach efforts aimed at increasing the number of local governments that are registered with www.Grants.gov and

educating local governments on improvements to the grant seeking and grants management processes will continue.

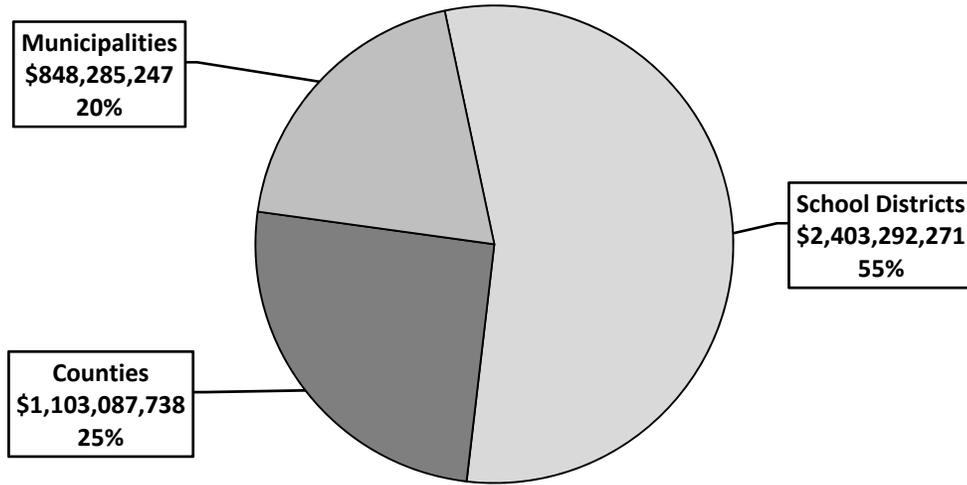

A section analyzing reported expenditures by county, as a unit of geography rather than a unit of government, is also included. Analysis of this data shows that differences in expenditures between the smaller and larger counties are significant, and highlights the importance of population in relation to expenditures. The role of population can be seen in **Table 3**, which shows that a clear trend can be identified by the relative clustering of data points along a trend line.

Expenditure data from fiscal year 2007 is next used to profile individual school districts, counties, and municipalities. Aggregate expenditures, expenditures sorted by federal source agency, and expenditures sorted by type of grant are included to provide a clearer picture of what local governments are spending and where the funds are coming from. Trends identified in the prior report continue to appear in this report, primarily the trend of larger local governments spending more in total and smaller local governments spending more per capita.

Based upon analysis of survey results several additional recommendations have been included in this update. They are offered in addition to recommendations contained in the prior report. These recommendations suggest that in order to maximize their draw-down of federal funds, local governments should take the following actions:

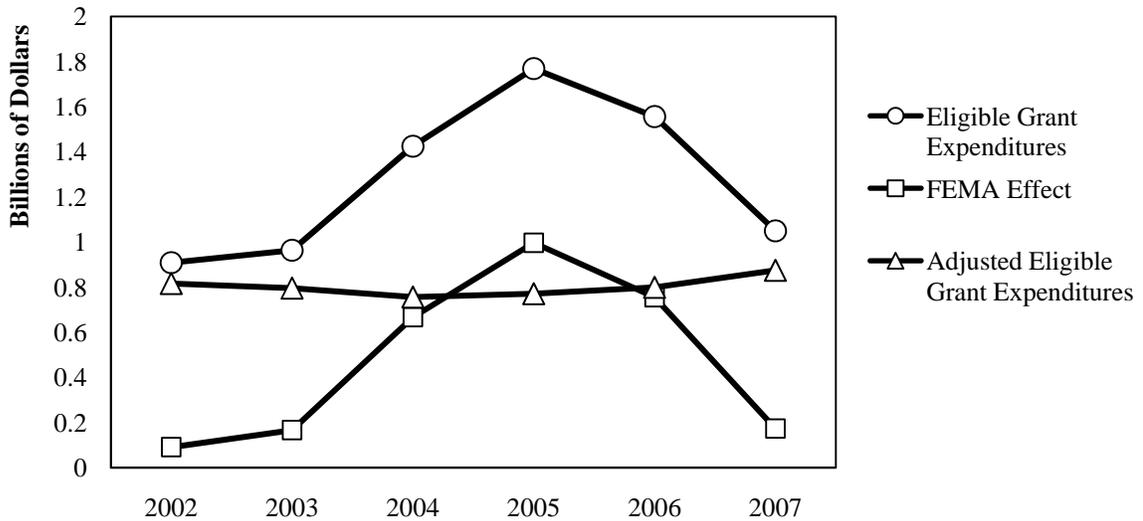

- Register with www.Grants.gov and take full advantage of all this interactive website has to offer.
- As www.Grants.gov continues to evolve, local governments should provide the website with feedback on issues that could bear improvement, such as timeframes, and uniformity of application processes and forms.
- Collaborate with other local governments and regional entities to explore meeting eligibility requirements of certain grants.
- Using the data posted on the LCIR's website, www.floridalcir.gov, local governments can compare themselves with neighboring or similarly situated local governments to ascertain whether they are taking full advantage of all available grant opportunities.
- Establish a centralized strategy for grant seeking; such as staff visiting www.Grants.gov weekly or monthly to check for available grants that can be identified through the preceding recommendation.
- Establish goals, such as asking senior staff to each identify a grant that could be presented to department heads, utilizing www.Grants.gov or the data presented on the LCIR website at www.floridalcir.gov.
- Once suitable grants have been identified to pursue, local government staff should develop a direct rapport with personnel from the granting agency through phone and e-mail contact whenever possible.
- Conduct cost-benefit analyses to assess the fiscal value of hiring one or more grant-writers.
- Identify federal and state policy changes needed to enhance Florida's access to federal funding streams.
- Support state efforts to form coalitions with similarly-situated states to pursue changes in outdated or inequitable federal funding formulas.
- Work with the state and Congress to implement changes to federal funding formulas determined to be outdated or inequitable.
- Invest in training provided at the state and local levels for accessing federal (and state) grant funding.
- When competing with local governments from other states for non-formula grants, enlist assistance from Congressional Offices, who are typically able to provide letters of support under these circumstances.

Updates to the Report

Several changes to the Florida Legislative Committee on Intergovernmental Relations (LCIR) Report, *Federal Grants to Florida's Local Governments* are included in this update. These changes expand the sample of grants and the sample of local governments. Using this expanded sample of local governments, a list of changes is provided below:

- A. A survey was conducted by LCIR staff to gauge the level of interest in grant-seeking and allow local governments the opportunity to provide feedback.
- B. Local Government expenditure tables represent fiscal year 2007 (FY 2007).
- C. The sample of grants has been expanded to include all grant programs (grants) in addition to grants that local governments are eligible to apply for (eligible grants).
- D. The sample of local governments has been expanded to include school districts and dependent special districts.
- E. Agency totals for grants and eligible grants are provided.
- F. Total and per capita expenditure tables for grants and eligible grants aggregated to include all local governments within a county are provided.
- G. Total and per capita expenditure tables for grants and eligible grants are provided.
- H. Total and per capita expenditure tables sorted by federal source agency for grants and eligible grants are provided.
- I. Total and per capita expenditure tables illustrating project grants and eligible project grants are provided.
- J. Total and per capita expenditure tables illustrating formula grants and eligible formula grants are provided.

Recommendations

Local governments should take the following steps to increase their receipt of federal grant funds:

- Register with www.Grants.gov and take full advantage of all this interactive website has to offer.
- As www.Grants.gov continues to evolve, local governments should provide the website with feedback on issues that could bear improvement, such as timeframes, and uniformity of application processes and forms.
- Collaborate with other local governments and regional entities to explore meeting eligibility requirements of certain grants.
- Using the data posted on the LCIR's website, www.floridalcir.gov, local governments can compare themselves with neighboring or similarly situated local governments to ascertain whether they are taking full advantage of all available grant opportunities.
- Establish a centralized strategy for grant seeking; such as staff visiting www.Grants.gov weekly or monthly to check for available grants that can be identified through the preceding recommendation.
- Establish goals, such as asking senior staff to each identify a grant that could be presented to department heads, utilizing www.Grants.gov or the data presented on the LCIR website at www.floridalcir.gov.
- Once suitable grants have been identified to pursue, local government staff should develop a direct rapport with personnel from the granting agency through phone and e-mail contact whenever possible.
- Conduct cost-benefit analyses to assess the fiscal value of hiring one or more grant-writers.
- Identify federal and state policy changes needed to enhance Florida's access to federal funding streams.
- Support state efforts to form coalitions with similarly-situated states to pursue changes in outdated or inequitable federal funding formulas.
- Work with the state and Congress to implement changes to federal funding formulas determined to be outdated or inequitable.
- Invest in training provided at the state and local levels for accessing federal (and state) grant funding.
- When competing with local governments from other states for non-formula grants, enlist assistance from Congressional Offices, who are typically able to provide letters of support under these circumstances.

A. Survey

A simple survey was conducted of local governments in an attempt to publicize this report, to further publicize www.Grants.gov, and gauge interest in grant seeking; tabulated results are presented in **Table A-1**. The survey was relatively brief, containing only four questions, three close-ended and one open-ended. The overall response rate was 20%, with 18% of school districts, 25% of counties, and 20% of municipalities responding.

The first question asked respondents to identify whether they are currently registered with www.Grants.gov; it received 111 total responses with 45% stating that they were registered with the website. When broken down by type of entity, 10 of the 12 school districts that responded were registered with 2 unsure, 12 of the 17 counties that responded were registered with 4 unsure, and 28 of the 82 municipalities that responded were registered with 21 unsure.

The second question asked local governments to describe their level of engagement in grant-seeking. The results suggest that as shown by the significant reported expenditures, most local governments that replied actively pursue grants as an important supplemental source of revenue. When broken down by type of entity, all of the 12 school districts that responded reported actively seeking grants while none reported passively seeking grants, 15 of the 17 counties that responded reported actively seeking grants while 2 reported passively seeking grants, and 37 of the 82 municipalities that responded reported actively seeking grants while 40 reported passively seeking grants, meaning they did not utilize goals or a centralized strategy.

The third question asked local government whether they had received any grant funds as part of a consortium of local governments. When broken down by type of entity, 11 of the 13 school districts that responded reported receiving funds as part of a consortium or helping local governments receive funds, 14 of the 17 counties that responded reported receiving funds as part of a consortium or helping local governments receive funds, and 29 of the 69 municipalities that responded reported receiving funds as part of a consortium or helping local governments receive funds.

The final question was open-ended and solicited suggestions as to how local governments could increase their draw-down of federal funds. Some of the more interesting responses included the suggestion that counties lead a consortium of municipal governments in applying for federal grants and allowing local governments to draw some administrative funds in advance. While it is more difficult to quantify these responses a general trend was observed. Many comments dealt with continued streamlining of the grant application process or providing more information regarding where grant opportunities can be found, and as such the LCIR will continue outreach efforts and attempts to publicize www.Grants.gov.

Several trends do bear discussion, first being the relatively low number of local governments that do not actively pursue grants. Some local governments do not pursue grants due to perceived rigorous grant management requirements and a high threshold for investing money on an application. These problems have been identified by the federal government and www.Grants.gov is part of the response. While some grants do require significant investments of time and money when submitting an application, this is not universal.

Second, many local governments indicated that while they do pursue federal funds the respondents were unaware of whether their local government was registered with www.Grants.gov. One simple example of a centralized strategy local governments can pursue is making staff aware that the government is registered with www.Grants.gov, making staff aware of who can apply through the website and asking staff to periodically monitor the website as time allows to ensure that no opportunities for funding are missed.

These results are summarized fully in **Table A-1** and provide valuable insight into local governments' perception of grants as a potential funding source and the extent to which they are attempting to pursue these revenue sources. Based upon analysis of these results several additional recommendations have been included in this update, and outreach efforts aimed at increasing the number of local governments that are registered with www.Grants.gov and educating local governments on improvements to the grant seeking and grants management processes will continue.

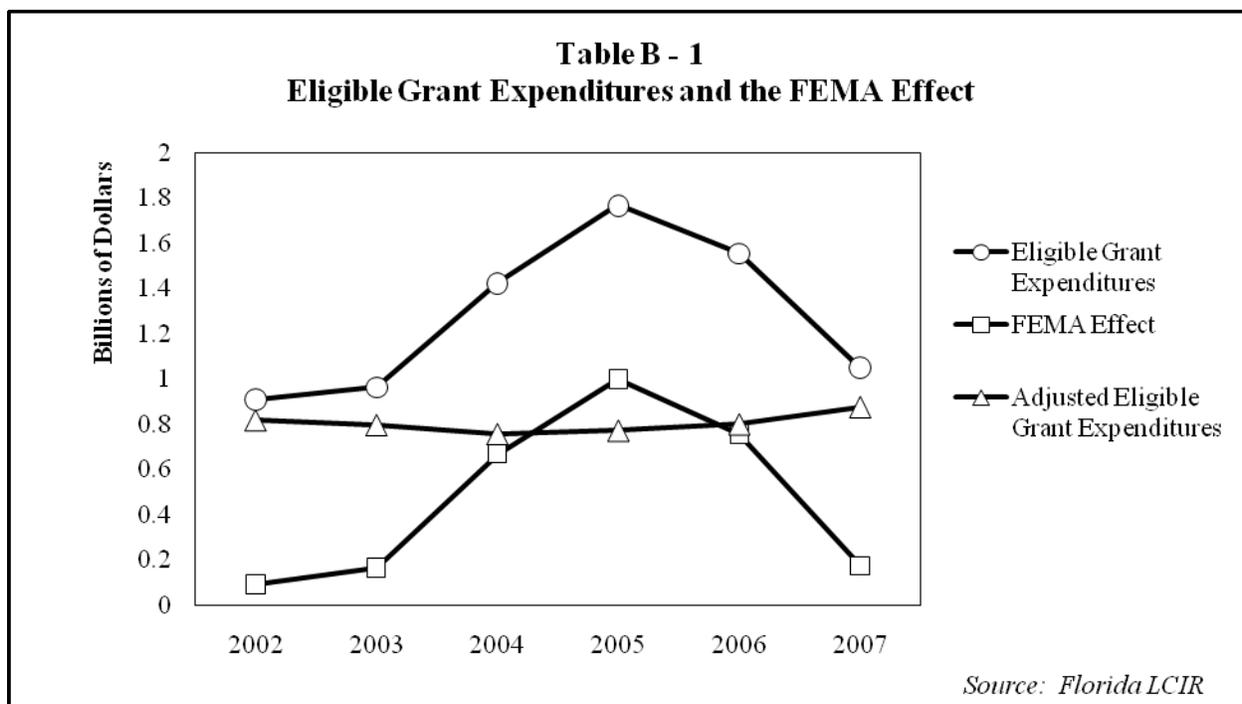

Table A - 1						
Summary of Responses to Federal Grants Survey of Local Governments						
Question 1	Yes		No		Unsure	
	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>
Is your local government registered with www.Grants.gov ?	50	45%	33	30%	27	25%
Question 2	1		2		3	
	Local Government does not pursue federal grants		Local Government pursues grants passively <i>no centralized strategy or goals</i>		Local Government pursues grants actively <i>centralized strategy and/or goals</i>	
	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>
On a scale of one to three, how engaged in grant-seeking is your local government?	5	5%	42	38%	64	58%
Question 3	Yes		No		Unsure	
	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>	<i>Count</i>	<i>Percent</i>
Has your local government received any grant awards as part of a consortium of local governments, or in any way helped other local governments to receive a federal award?	54	47%	41	37%	18	16%

B. Fiscal Year Covered in this Update

This update covers FY 2007 only, whereas the previous report covered the fiscal years ending in 2002-2006 cumulatively. This change is a reflection of the fact that 2002-2006 was a unique time period covering a significant federal re-organization with an increased focus on homeland security, and two of the most severe hurricane seasons on record. Due to the unique circumstances surrounding this time frame, illustrated in **Table B-1**, it was determined that a five year cumulative sample would minimize the effects of any one year, in addition to providing historical perspective. Tables and spreadsheets associated with this report are easily comparable with the annual expenditure tables contained in the Appendices of *Federal Grants to Florida's Local Governments*, and the associated spreadsheets highlighting grant level expenditures available on the LCIR website.¹

Table B-1 also illustrates the diminishing role played by the “FEMA Effect”² as the state moves on from the 2004 and 2005 hurricane seasons. This effect will continue to lessen although it is not likely to drop to zero simply because of the continued presence of natural disasters such as the tornadoes that struck central Florida in 2007.³ Analysis of historical trends will continue to include this adjustment; however, it is no longer necessary to account for this effect in reporting local government expenditures after FY 2006 due to the decrease in relative magnitude.

FY 2006 Spreadsheet; <http://www.floridalcir.gov/UserContent/docs/File/data/06grantsmat.xls>

FY 2007 Spreadsheet; <http://www.floridalcir.gov/UserContent/docs/File/data/07grantsmat.xls>

² For a full discussion, see the Florida LCIR report: *Federal Grants to Florida's Local Governments*.

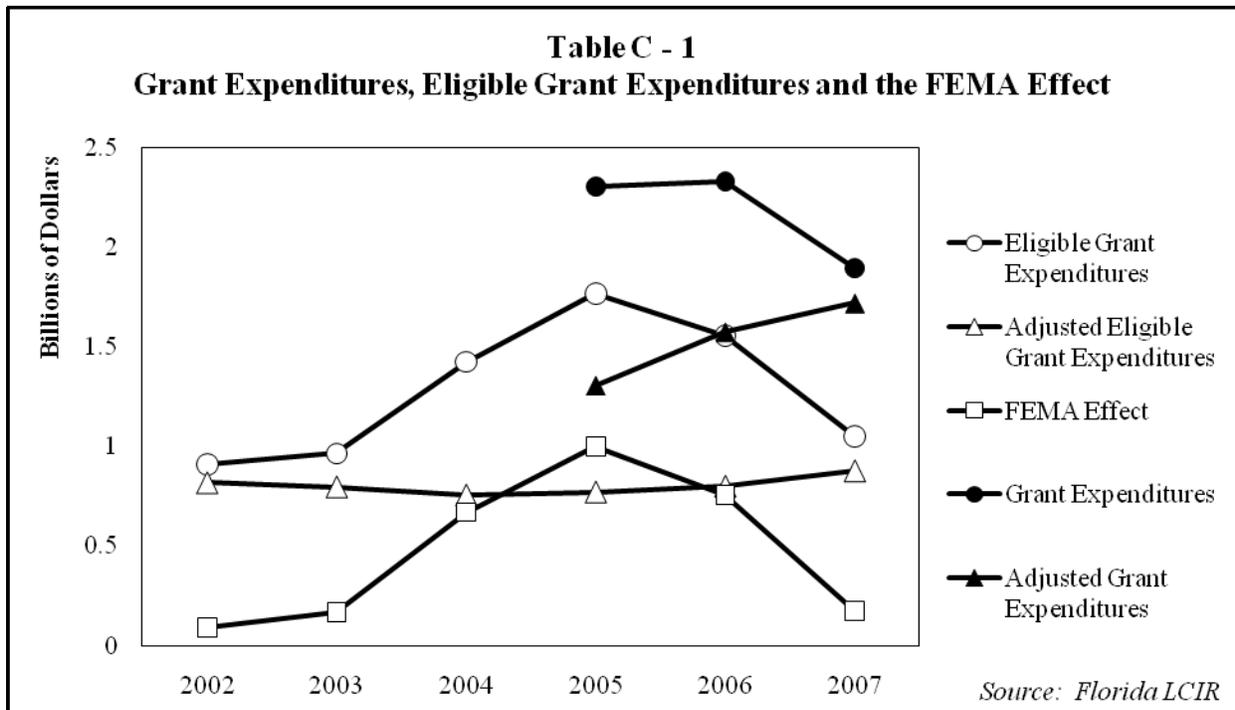

³ Disasters Number 1679 and 1680 allowed certain counties to apply for Public Assistance Grants and all counties within the state to apply for Hazard Mitigation Grants; http://www.fema.gov/news/disasters_state.fema?id=12

This page was intentionally left blank.

C. Types of Federal Assistance Covered in This Report

Expenditures covered in this report are sourced to grant programs as defined by the Catalog of Federal Domestic Assistance (CFDA) and are not limited to those grants that list local governments as an eligible applicant.⁴ This is a change from the LCIR report *Federal Grants to Florida’s Local Governments* intended to illustrate the significant role the state plays as a pass-through entity. Tables illustrating grants that local governments are eligible to apply for are included to maintain consistency with the LCIR report *Federal Grants to Florida’s Local Governments*. The result of these changes is to expand the sample of expenditures included in report tables, as illustrated in **Table C-1**.

The difference between grants and eligible grants should be further clarified at this point, and will be referenced in later sections of this update. Both grants and eligible grants will include pass-through awards and direct awards; however eligible grants are limited to those grants that list local governments as eligible applicants in the CFDA and as such will contain fewer pass-through awards. Grants will include more pass-through awards because they include grants that locals are not eligible to apply for, which the state applies for and then passes on to local governments. This distinction is used to reflect the role of the state in securing federal funds that are then spent by local governments.

⁴ Eligibility data drawn from CFDA Applicant Eligibility Index, available online at <http://www.cfda.gov/CFDA.pdf>

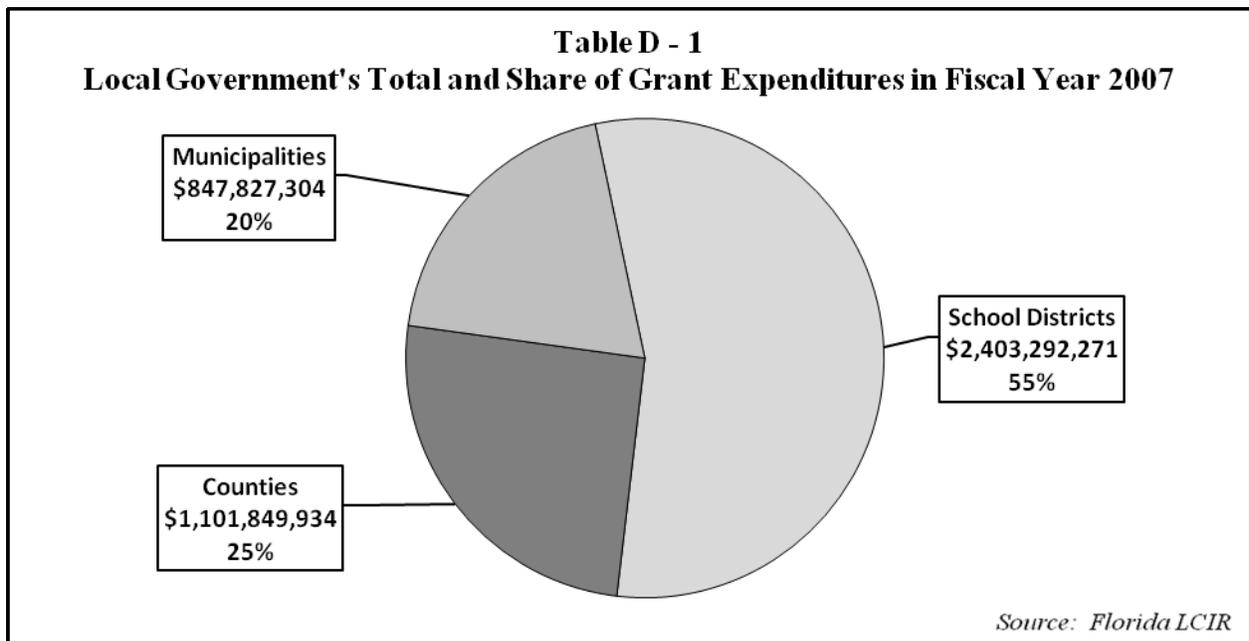

This page was intentionally left blank.

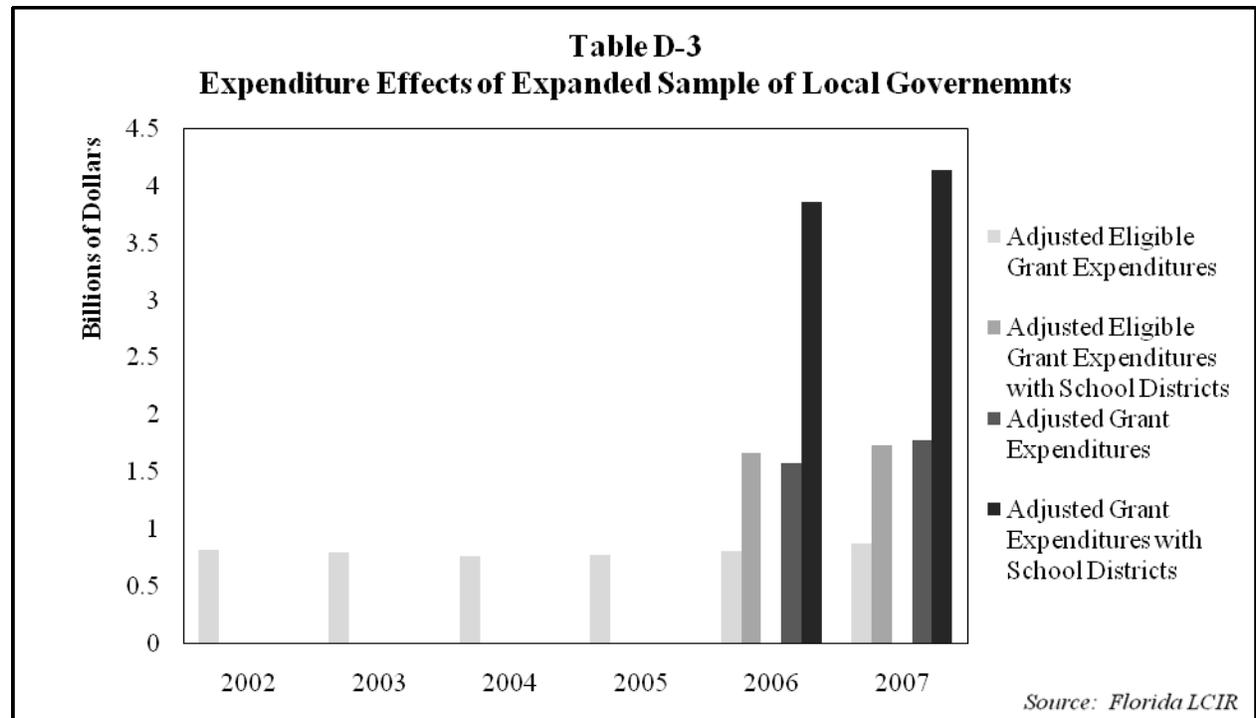

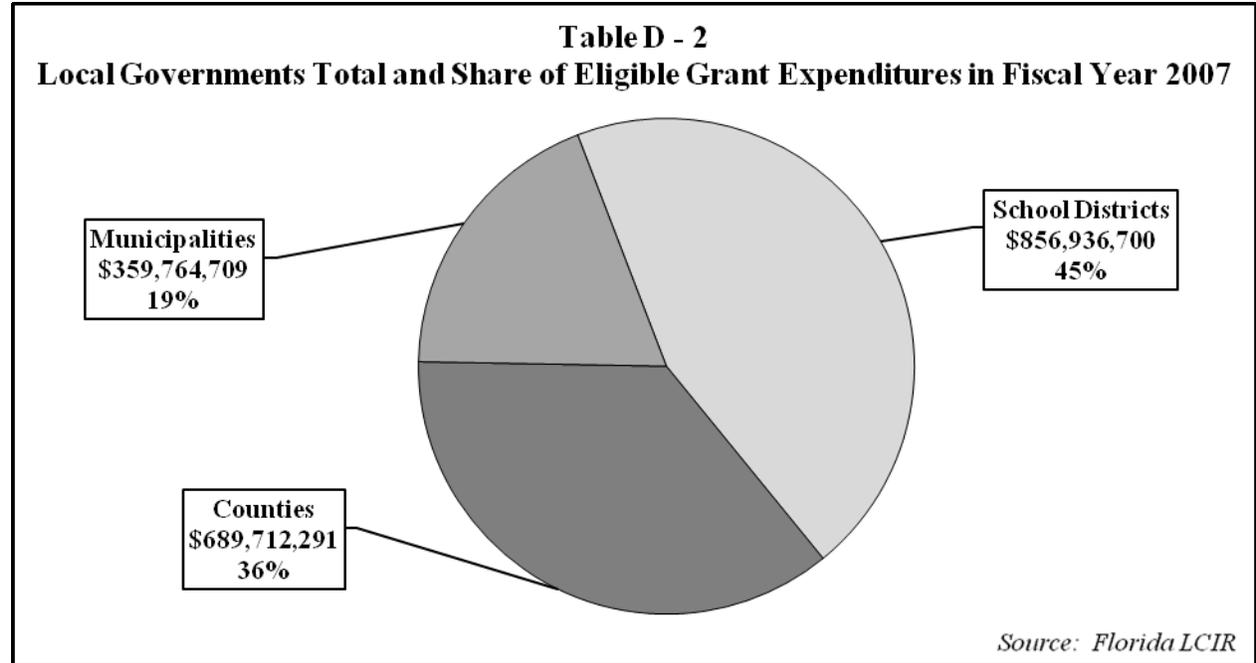

D. Entities Covered in This Report

This report covers school districts, counties, and municipalities as well as dependent special districts of counties and municipalities. This report does not cover expenditures by the State of Florida or by independent special districts. It should be noted that whereas prominent Census Bureau reports contain information either covering all types of governments or all grant equivalent programs, this report generally considers a subset of both and thus presents results which should be uniquely interesting to local governments.

The expansion of the sample of local governments to include school districts more than doubles aggregate expenditure levels, with school districts encompassing 56% of all grant expenditures as illustrated in **Table D - 1**. The state plays a significant role as a pass-through entity, as illustrated by **Table D - 2**, which shows school districts' share falling to 47%. Including school districts significantly increases total expenditure levels, as shown in **Table D - 3**.

One important distinction must be noted regarding the inclusion of school districts in our sample. School districts are structurally different than counties and municipalities in that they draw down significantly larger awards, and a large proportion of their expenditures are from pass-through awards. This is acknowledged and reflected in this update, particularly in terms of the analysis of expenditures sorted by source agency and of project and formula grants. While this distinction does bear mention it is also important to note that total expenditures of eligible grant awards still compare favorably to those reported by either counties or municipalities.

E. Total Expenditures and Share of Expenditures by Agency

Expenditures are aggregated by source agency to provide insight into the source of the funds that are being spent by local governments. Approximately 98% of the \$4.2 billion in expenditures can be traced to the seven agencies illustrated in **Table E-1**, although this falls to approximately 97% of the \$1.9 billion in expenditures when eligible grants are presented in **Table E-2**. The shares of total grant expenditures reported by local governments that can be sourced to each agency are illustrated in **Table E-3**; this information is available for eligible grants in **Table E-4**. At this point it is worthwhile to once again note that eligible grants refers to those awards which local governments are allowed to apply for as defined by the CFDA while grants includes these eligible grants as well as those programs which the state must apply for and then pass-through to locals.

Table E-4
Local Government Eligible Grant Expenditures Sorted by Federal Source Agency

F. Grant Expenditures by County Area

This section presents grant expenditures aggregated by county. Differences between the smaller and larger counties are significant. This is not surprising in the least, as is shown by the example of Miami-Dade County where both the school district and county government report the greatest expenditures of their respective type of local government and are supplemented by the numerous municipalities within the county reporting expenditures. Much of the variation in grant expenditures is correlated with population differences, as illustrated graphically in **Table F-1** for grants and **Table F-2** for eligible grants.⁵ Expenditure data is presented numerically for grants in **Table F-3** and for eligible grants in **Table F-4**.

⁵ The relative clustering of data points around the trend line is indicative of the important role played by population in grant expenditures.

G. Local Government Expenditures

This section analyzes grant expenditures by the respective types of local governments covered in this update. Each type of local government is analyzed separately to avoid comparing “apples to oranges” and so that analysis can recognize the nuances of each type of local government.

Furthermore, there are clearly different rates at which different types of local governments file federal single audits. This is due to both the number of entities that qualify for a single audit and timing issues related to the local government’s fiscal year. These factors are illustrated by school districts, which have a fiscal year that ends earlier in the year, June 30, than counties or municipalities, September 30, and generally report greater expenditures than other local governments. Furthermore, school districts and county governments will provide a broader array of services to a larger geographical area than municipal governments which may provide services to a very small area within a county. These factors mean that as of the writing of this report school districts are much more likely to have a single audit on file with the Federal Audit Clearinghouse for the most recent fiscal year.

Local governments may choose to supplement this analysis and further limit the sample, such as comparing all counties or municipalities within a population range or all school districts within an enrollment range. Analysis based on these and other relevant factors can also be undertaken using the grant level expenditure data provided on the LCIR website.⁶

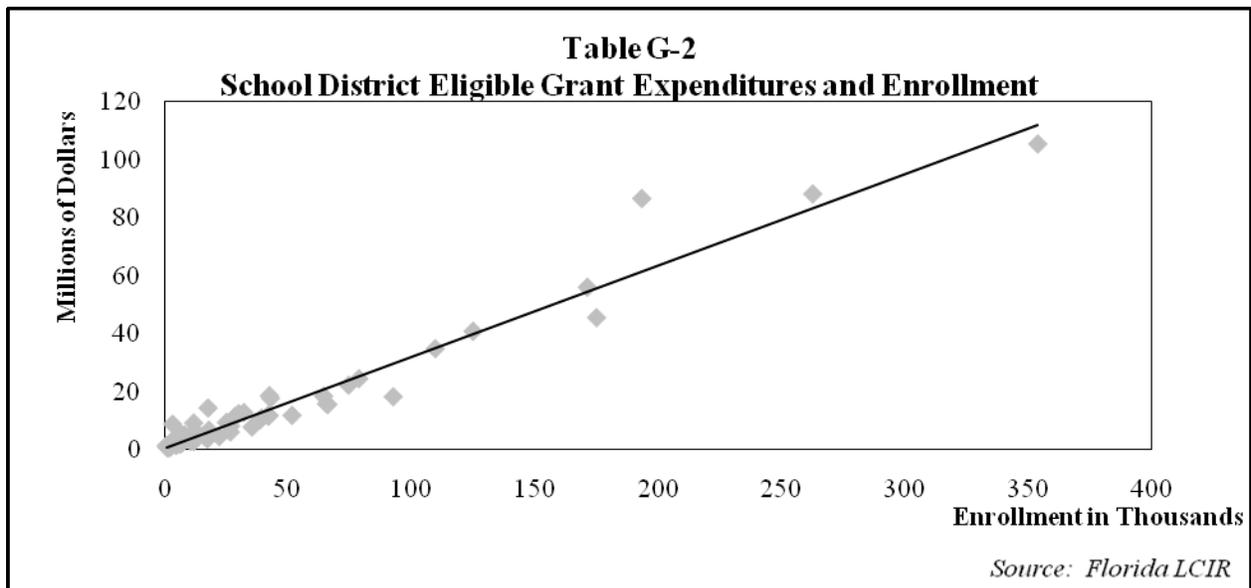

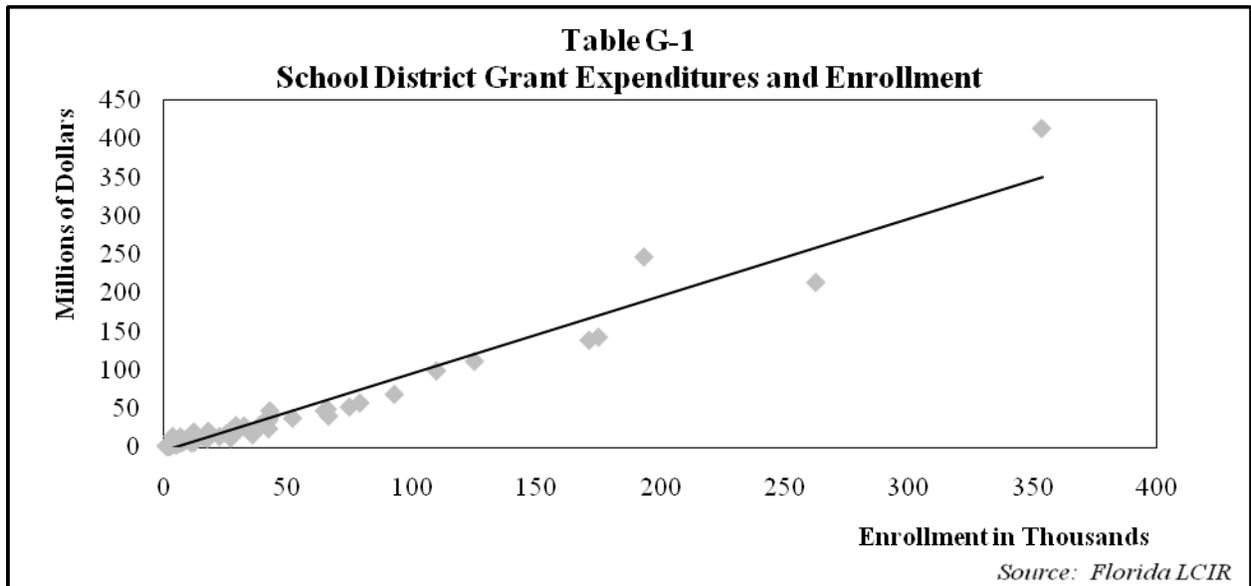

Finally, the distinction between grants and eligible grants bears reiterating. As previously noted this distinction means that two totals are reported for each entity. One total reflects those grants that local governments are eligible to apply for, according to the CFDA; these totals are identified as eligible grants. The other total reflects all grant expenditures reported by the local government, which will contain significant pass-through awards in addition to expenditures from the total identified as eligible grants.

1. School Districts

School Districts are highly dependent on pass-through awards from the state. Also, both grant and eligible grant expenditures appear to be highly dependent upon population; **Table G-1** shows the relationship between enrollment and grant expenditures and **Table G-2** shows the relationship between enrollment and eligible grants. Expenditures drop from approximately \$2.5 billion for grants in **Table G-3** to less than \$900 million for eligible grants in **Table G-4**.

2. County Governments

County expenditures are largely dependent upon population as shown in **Table G-5** for grant expenditures and **Table G-6** for eligible grant expenditures. Grant expenditures decline from \$1.1 billion in **Table G-7** to \$690 million in **Table G-8**, and are greatest for the larger, more urban counties.

**Table G-7
County Grant Expenditures**

3. Municipal Governments

Municipal expenditures are largely dependent upon population, as shown in **Table G-9** for grant expenditures and **Table G-10** for eligible grant expenditures. The decline in grant expenditures from \$750 million in **Table G-11** to \$285 million in **Table G-12** illustrates the importance of pass-through awards. It should also be noted that certain municipalities have had reported expenditures adjusted to reflect the value of loans provided through the USDA Rural development program.⁷

⁷ Reported expenditures from Water and Wastewater Disposal Systems for Rural Communities (CFDA Number 10.760 and 10.770) and Community Facilities Loans and Grants (CFDA Number 10.766) are scaled based upon average value for loans and grants contained in the CFDA.

H. Source Agency Totals by Local Government

This section analyzes grant expenditures by the respective types of local governments covered in this report sorted by source agency as identified through CFDA Number prefixes. Naturally the dominant agencies vary across the type of local government, which is reflected in the data.

These differences across local government types reflect differing structures and purposes across different kinds of governments as well as differing roles of the state and federal government. These differences will be accepted for the purpose of this report and the most pertinent conclusions will be between local governments within a respective type, not across different types of local governments.

Local governments may choose to expand upon this analysis, for example, comparing expenditures from a single agency. This analysis can be supplemented based on additional factors using the grant level expenditure data provided on the LCIR website.⁸

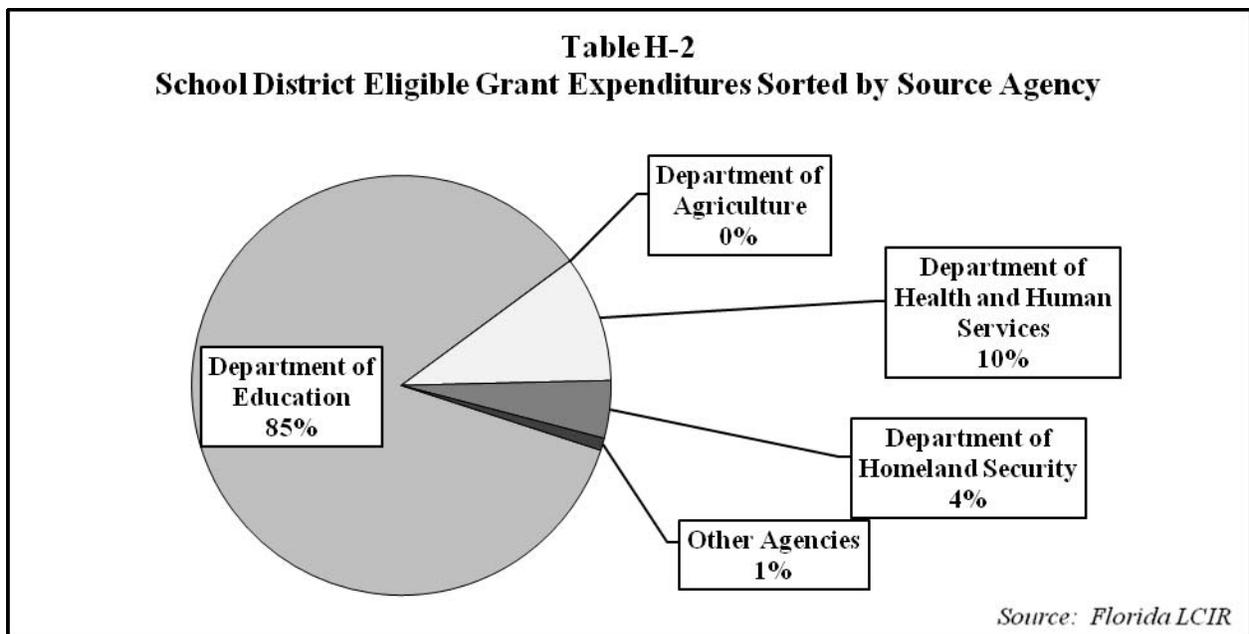

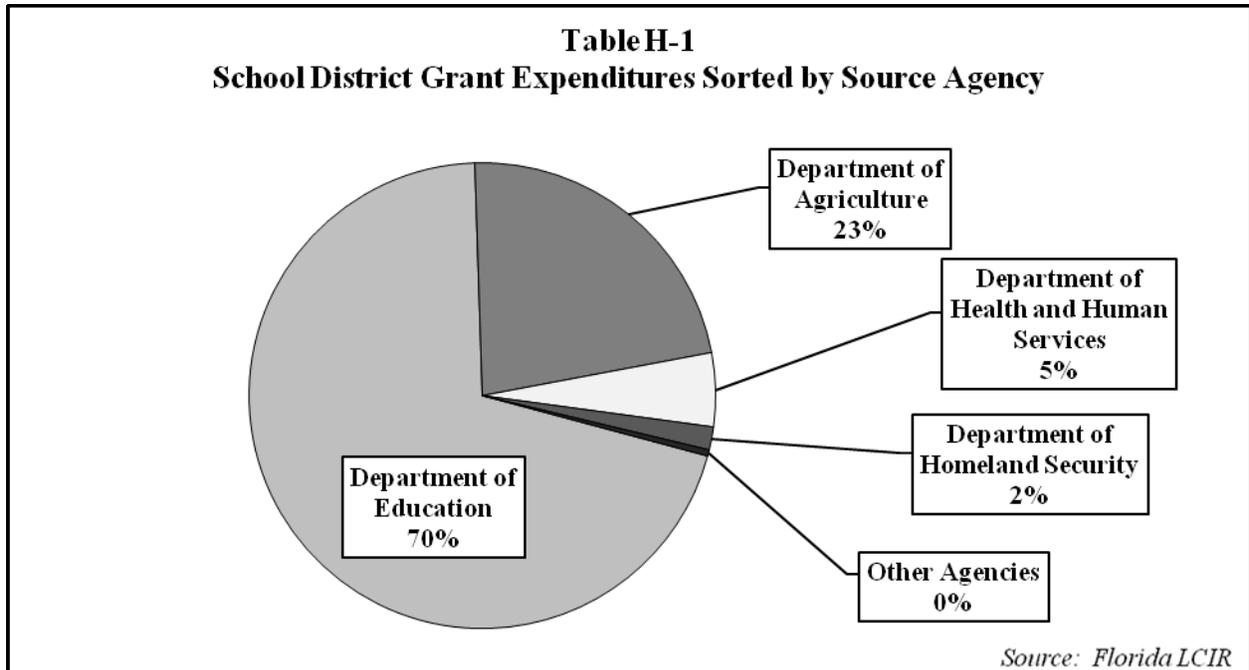

Finally, the distinction between grants and eligible grants bears reiterating. As previously noted this distinction means that two totals are reported for each entity. One total reflects those grants that local governments are eligible to apply for, according to the CFDA; these totals are identified as eligible grants. The other total reflects all grant expenditures reported by the local government, which will contain significant pass-through awards in addition to expenditures from the total identified as eligible grants.

1. School District Expenditures

Naturally, school districts are highly dependent on U.S. Department of Education (DOE) awards, as illustrated in **Table H-1** for grants and **Table H-2** for eligible grants. Furthermore, **Table H-3** shows the greatest grant expenditures and **Table H-4** shows the greatest eligible grant expenditures are all sourced to DOE and reported by larger, urban school districts. Greater per capita expenditures come from smaller to moderately sized school districts; illustrated by **Table H-5** for grants and **Table H-6** for eligible grants.

**Table H-3

2. County Government Expenditures

County governments reported expenditures from a variety of agencies; illustrated by **Table H-7** for grants and **Table H-8** for eligible grants. Furthermore, **Table H-9** and **Table H-10** show the greatest grant and eligible grant expenditures respectively are generally reported by larger, urban counties. Greater per capita expenditures come from smaller to moderately sized counties, as illustrated by **Table H-11** for grants and **Table H-12** for eligible grants.

**Table H-9
County Grant Expenditures Sorted by Agency**

County	Fiscal Year 2007 Grant Expenditures

3. Municipal Government Expenditures

Municipal governments reported expenditures from the agencies illustrated in **Table H-13** for grants and **Table H-14** for eligible grants. **Table H-15** and **Table H-16** show the greatest eligible grant expenditures are generally reported by larger municipalities. Greater per capita expenditures are generally reported by smaller to moderately sized municipalities, as illustrated by **Table H-17** for grants and **Table H-18** for eligible grants.

**Table H-15

I. Project Grants

While project grants generally make up less as a percentage of total grant expenditures than formula grants the greatest increases in draw down and subsequent expenditures of grant funds can come in this area. Grant seeking will play a larger role in increasing the draw-down of project grants due to the competitive award process.

For the purposes of this section federal agency names are shortened or abbreviated, the complete list of abbreviations for this section is included below but should prove relatively intuitive.

DHS – U.S. Department of Homeland Security
DOE – U.S. Department of Education
DOJ – U.S. Department of Justice
DOT – U.S. Department of Transportation
EPA – U.S. Environmental Protection Agency
HHS – U.S. Department of Health and Human Services
HUD – U.S. Department of Housing and Urban Development
LABOR – U.S. Department of Labor
USDA – U.S. Department of Agriculture

Finally, the distinction between grants and eligible grants bears reiterating. As previously noted this distinction means that two totals are reported for each entity. One total reflects those grants that local governments are eligible to apply for, according to the CFDA; these totals are identified as eligible grants. The other total reflects all grant expenditures reported by the local government, which will contain significant pass-through awards in addition to expenditures from the total identified as eligible grants.

1. School Districts

Project grant expenditures by school districts are dominated by the larger urban districts with the most resources to actively pursue grant funds, as illustrated for grants in **Table I-3** and eligible grants in **Table I-4**.

2. Specific Project Grant Programs – School Districts

As shown by **Table I-1**, the greatest expenditures are reported from the Reading First State Grants program, although this is followed very closely by the Head Start program. **Table I-2** illustrates the top ten programs in terms of eligible project grants.

Table I-1		
Project Grant Expenditures by School Districts Sorted by Program		
CFDA Number⁹	Program Name	Expenditures
84.357 (DOE)	Reading First State Grants	\$56,651,327
93.600 (HHS)	Head Start	56,513,443
84.365 (DOE)	English Language Acquisition Grants	43,937,211
97.036 (DHS)	Public Assistance - Presidentially Declared Disasters	37,590,498
84.215 (DOE)	Fund for the Improvement of Education	17,730,101
84.165 (DOE)	Magnet School Assistance	17,131,713
84.361 (DOE)	Voluntary Public School Choice	8,605,838
93.576 (HHS)	Refugee and Entrant Assistance - Discretionary Grants	8,429,678
84.184 (DOE)	Safe and Drug Free Schools and Communities - National Programs	7,824,135
84.282 (DOE)	Charter Schools	7,365,804

3. County Governments

Project grant expenditures are greatest by the large urban counties, in particular Miami-Dade County with more than triple the next greatest expenditure as illustrated for grant expenditures in **Table I-7** and eligible grant expenditures in **Table I-8**.

4. Specific Project Grant Programs – Counties

County governments exhibit a relative degree of balance in terms of source, with expenditures in the top ten sourced to six different agencies as shown for grants in **Table I-5** and eligible grants in **Table I-6**. Public Assistance in the case of Presidentially Declared Disasters is the program with the greatest reported expenditures, however the magnitude of expenditures are significantly below what was exhibited in previous years.

Table I-5

5. Municipal Governments

Project grant expenditures are greatest by the largest municipalities, in particular the consolidated government of Jacksonville/Duval County as illustrated for grant expenditures in **Table I-11** and eligible grant expenditures in **Table I-12**.

6. Specific Project Grant Programs – Municipalities

As shown by **Table I-9**, the greatest expenditures are reported from the Highway Planning and Construction program, followed by Public Assistance Grants for Presidentially Declared Disasters. **Table I-10** illustrates the top ten programs in terms of eligible project grants.

Table I-9		
Project Grant Expenditures by Municipal Governments Sorted by Program		
CFDA Number	Program Name	Expenditures
20.205 (DOT)	Highway Planning and Construction	\$67,958,646
20.106 (DOT)	Airport Improvement Program	46,800,310
97.036 (DHS)	Public Assistance - Presidentially Declared Disasters	46,075,888

J. Formula Grants

Formula grant programs generally exhibit greater reported expenditures than project grants, regardless of the type of local government. School districts exhibit the greatest share of total expenditures coming from formula grants, with more than \$2.1 billion from formula grants as opposed to less than \$300 million from project grants.

Because formula grants are not distributed competitively, there is less that local governments can do to increase their draw-down. In fact, aside from lobbying for changes to distribution formulas and/or simply being aware of the formula grants a local government is eligible for, there is little that can be done to increase draw-down of this type of grant. Despite these caveats, it is still advisable for local governments to be aware of what programs their neighbors and similarly situated local governments are participating in.

For the purposes of this section federal agency names are shortened or abbreviated. The complete list of abbreviations for this section is included.

DHS – U.S. Department of Homeland Security
DOE – U.S. Department of Education
DOJ – U.S. Department of Justice
DOT – U.S. Department of Transportation
EPA – U.S. Environmental Protection Agency
HHS – U.S. Department of Health and Human Services
HUD – U.S. Department of Housing and Urban Development
LABOR – U.S. Department of Labor
USDA – U.S. Department of Agriculture

Finally, the distinction between grants and eligible grants bears reiterating. As previously noted this distinction means that two totals are reported for each entity. One total reflects those grants that local governments are eligible to apply for, according to the CFDA; these totals are identified as eligible grants. The other total reflects all grant expenditures reported by the local government, which will contain significant pass-through awards in addition to expenditures from the total identified as eligible grants.

This page was intentionally left blank.

1. School Districts

Formula grant expenditures are dominated by the larger urban school districts, as illustrated for grant expenditures in **Table J-3** and eligible grant expenditures in **Table J-4**. Smaller school districts exhibit the greatest per capita expenditures; in fact the two school districts with the lowest enrollment are both in the top ten of per capita expenditures.

2. Specific Formula Grant Programs – School Districts

As with project grants, formula grant expenditures by school districts are generally sourced to DOE, with the only exceptions being two USDA programs. **Table J-1** shows Title I Grants to Local Education Agencies as the top program with nearly \$650 million in expenditures, while the tenth ranked program has reported expenditures of less than \$20 million. **Table J-2** illustrates eligible grant expenditures by school districts.

3. County Governments

County government formula grant expenditures are also dominated by the largest urban counties; in fact Miami-Dade is responsible for more than a quarter of all expenditures while the top four counties (Miami-Dade, Broward, Hillsborough, and Pinellas) make up nearly half of all expenditures. **Table J-7** shows grant expenditures and **Table J-8** shows eligible grant expenditures.

4. Specific Formula Grant Programs – Counties

Table J-5 illustrates grant expenditures while **Table J-6** illustrates eligible grant expenditures. It is noteworthy that four of the programs are block grants, which give local governments a relative degree of freedom in terms of spending, and predictability in terms of budgeting.

Table J-5		
Formula Expenditures by County Governments Sorted by Program		
CFDA Number	Program Name	Expenditures
93.575 (HHS)	Child Care and Development Block Grant	\$114,646,732
14.218 (HUD)	Community Development Block Grants/Entitlement Grants	88,851,656
20.205 (DOT)	Highway Planning and Construction	70,132,410
20.507 (DOT)	Federal Transit - Formula Grants	63,555,604
14.239 (HUD)	HOME Investment Partnership Program	44,140,324
14.228 (HUD)	Community Development Block Grants - State's Program	43,182,875
66.468 (EPA)	Capitalization Grants for Clean Water State Revolving Funds	24,110,182
93.563 (HHS)	Child Support Enforcement	21,417,097
93.568 (HHS)	Low Income Home Energy Assistance	18,515,205
93.667 (HHS)	Social Services Block Grant	17,005,650

5. Municipal Governments

Formula grant expenditures are dominated by the larger municipalities, as illustrated for grant expenditures in **Table J-9** and eligible grant expenditures in **Table J-10**. In particular, expenditures by Jacksonville/Duval County are more indicative of what would be seen for a county, representing the increased responsibilities of this consolidated government

6. Specific Formula Grant Programs – Municipalities

Table J-7 illustrates grant expenditures while **Table J-8** illustrates eligible grant expenditures. It is once again noteworthy that three of the programs are block grants, one from HHS and two from HUD. As was noted in the analysis of county governments, block grants give local governments a relative degree of freedom in terms of spending, and predictability in terms of budgeting.

Table J-9		
Formula Grant Expenditures by Municipal Governments Sorted by Program		
CFDA Number	Program Name	Expenditures
66.458 (EPA)	Capitalization Grants for Clean Water State Revolving Funds	\$294,155,172
14.218 (HUD)	Community Development Block Grants/Entitlement Grants	77,366,402
20.205 (DOT)	Highway Planning and Construction	67,958,646
14.239 (HUD)	HOME Investment Partnership Program	46,250,836
66.468 (EPA)	Capitalization Grants for Drinking Water State Revolving Funds	33,963,071
14.228 (HUD)	Community Development Block Grants/State Grants Program	35,241,811
14.241 (HUD)	Housing Opportunities for Persons with AIDS	31,263,952
93.575 (HHS)	Child Care and Development Block Grant	31,177,367
97.067 (DHS)	Homeland Security Grant Program	20,764,431
16.738 (DOJ)	Edward Byrne Memorial Justice Assistance Grant Program	3,669,937
